About IIT Delhi

Indian Institute of Technology Delhi is one of the 23 IITs created to be Centres of Excellence for training, research and development in India's science, engineering and technology.

Established as the College of Engineering in 1961, the Institute was subsequently declared as Institution of National Importance under the "Institutes of Technology (Amendment) Act, 1963 and was renamed "Indian Institute of Technology Delhi". It was then accorded the status of a Deemed University with powers to decide its academic policy, conduct its own examinations, and award its degrees.

Since its inception, more than 66,000 students have graduated from IIT Delhi in various disciplines including Engineering, Physical Sciences, Management, and Humanities & Social Sciences. Of these, 8,038 students graduated with Ph.D. degree and 22,336 students graduated with B.Tech. degree. The rest obtained Master's Degree in Engineering, Sciences, Humanities & Social Sciences and Business Administration.

These alumni today work as scientists, technologists, business managers and entrepreneurs. Several alumni have moved away from their original disciplines and have taken to administrative services, active politics or are with NGOs. In doing so, they have contributed significantly to building of this nation.

Department of Energy Science and Engineering (DESE)

Department of Energy Science and Engineering [DESE], formerly known as the Center for Energy Studies [CES], was established at IIT Delhi, by the Government of India, in 1976 with the mandate to promote education and research in energy. The centre, ***the first entity on energy education in an academic Institute***, focused on both conventional and non-conventional energy resources, laying the groundwork with essential infrastructure and academic programmes. The Centre started with doctoral programmes in the late 70s and thereafter an M. Tech. programme in Energy Studies (JES) in 1981 which was followed by another evening M. Tech. programme for working professionals on Energy & Environment Technologies and Management (JEN) in 1989. In 2019, the JEN programme became a full-time day programme (and re-coded as ESN) for both working professionals and fresh undergraduates. Additionally, a fully sponsored International programme on Renewable Energy Technologies and Management (ESR) was also started in 2019, in which the International Solar Alliance (ISA) sponsors about 50% of the allocated seats. To further expand the scope and depth of academic and research activities being undertaken by an ***almost five decade*** Centre, it became 'Department of Energy Science and Engineering' in 2021. In the same year, it launched a B.Tech. programme in 'Energy Engineering' and an MS (Research) programme in 'Energy Science and Engineering'. Now entering its **50th year of existence**, it has started a sponsored Post Graduate Diploma in Solar Systems and Management in collaboration with ISA, Institut National de l'Energie Solaire (INES) France and United Nations Industrial Developmental Organization (UNIDO). DESE (earlier CES) is committed to a clean and green energy future. Its mission is to develop skilled professionals in interdisciplinary energy fields who can drive the transition towards a carbon-free economy through safe, clean, reliable and competitive energy solutions.

NOTE FROM THE HEAD

https://dese.iitd.ac.in/

Prof. Ramesh Narayanan
Head, DESE

Department of Energy Science and Engineering (DESE) [initially established as Centre for Energy Studies in October 1976] has been working towards training manpower required to meet the growing demands of the energy sector as well as investing efforts into undertaking cutting-edge research while investigating various modern techniques of energy harvesting in a sustainable way for five decades. With this motivation, this academic entity has been working for the past **50 years** to create adequately trained manpower at the postgraduate (M. Tech. and Ph.D.) levels. The necessity of meeting the growing demands of human resources for the energy transition at various levels of expertise has been a motivating factor for the department to start a technical educational program at the undergraduate level, *i. e.* a B.Tech. in Energy Engineering, in 2021 along with a Masters of Science in Research [MS(R)] program. The research and teaching experiences of our esteemed & committed faculty members has helped our students, at both UG and PG levels, to develop their knowledge and skill set according to the needs of the industry and society. Since the technologies are continuously evolving in various new energy domains, some ecosystems for indigenous technologies are also required apart from adopting the existing global technologies in those domains.

Needless to say, these above academic programs are designed to not only provide our students know-how of the state-of-the-art engineering aspects of all prevalent energy technologies, through the entire conversion process (starting from the primary energy resource till the useful energy form which the common-public utilizes for meeting one's own needs), but it also provides the students a training to evaluate these technologies from the viewpoint of energy economics as well as energy management.

In addition, DESE has been closely working with the International Solar Alliance (ISA), since 2019, to train human resources for international students from ISA countries, across the global south, preparing them to take up the challenges of the energy transition in the coming years in their respective countries. Our national students interact with these international students, as they reside in the same campus, enabling the former to also get a more global perspective of energy while interacting with these mid-career professionals.

Hence, I am quite optimistic that the trained human resources of our department will be at the forefront to provide energy efficient as well as economical solutions for the overall development of any organization with which they will be involved in the future. At the end, I would also take this opportunity to wish all our final year students a bright career in the near future and make our department proud

SKILLS, SPECIALISATIONS & SUCCESS

ENERGY SPECIALISATION

Battery
Battery Fabrication · Battery Management System · Sodium Ion Battery Fabrication

Solar
PV · Solar Thermal · Semiconductor Manufacturing · HJT · Perovskite · Thin film

Alternate Fuel
Hydrogen blending · CFD of combustion Systems · Chemical Kinetics · Biomass

Building Energy Management
Smart Metering · Green Building · Thermal Management

Hydrogen
Fuel Cell · Green Hydrogen Value Chain · Electrolyser Fabrication

Wind & Hydro
WRA · CFD Turbine Design · WRA · EYA · MCP · Micro-siting · Wind-Farm CFD · Wake Modelling

Electrical Energy
Power Electronics Energy Storage Grid Stabilisation · Control System

Plasma-based Technologies
Large area sources for Fusion Plasma · Plasma Thrusters · Waste-Water management · Bio-medical applications · CO2 conversion to fuel

Energy & Environment Management
Carbon Capture, Utilisation and Storage, Life Cycle Analysis, Techno-Economical Analysis · Financial Analysis · Project Management

SKILLS IN ENGINEERING & TECHNOLOGY

Engineering Software
ANSYS, COMSOL, CONVERGE, OpenFOAM, Aspen Plus, SolidWorks, AutoCAD,

CREO, CAD, CAM, Homer Pro, PVsyst, SAM, MATLAB, SCADA, PSCAD, SCAPS,

PC1D, PLECS, MS LATTICE, ANSYS Fluent / CFX, ICEM CFD, WAsP, WindPro

Experimental Skills
Material Synthesis · Fuel Cells and Electrolyser · Engine and Fuel Testing · PECVD,

Semiconductor based manufacturing · Thermo-Fluid Control · Plasma Diagnostics ·

Electrical and Power Electronics · PCB Designing · Industry Standard Testing Protocols ·

Turbomachinery · Material Characterisation

Analytical Skills
Advanced Excel, PowerBI, Tecplot, OriginLab, SQL, Python, Tableau, R, C, C++, Java, AI-ML Tools

PLACEMENT HIGHLIGHTS

Department of Energy Science & Engineering

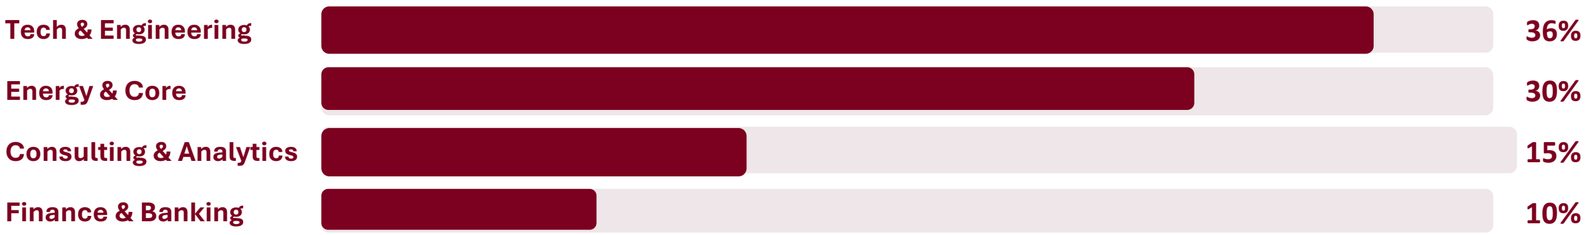

87% Overall Department

85% B.Tech Placed

85% M.Tech & MS(R) Placed

50% of offers from returning firms

WHERE OUR TALENT GOES — RECRUITER

RECRUITERS SCALING UP

Sterlite Group +160%
With Serentica Renewables · core energy

Envision +300%
New core-energy recruiter

Hexa Climate Solutions +100%
Hired in both seasons

21 firms hired from DESE for the first time this season — including Amazon, BlackRock, JPMorgan Chase, and S&P Global.

Fast, high-conversion window

79% of this season's offers closed inside the 1–6 December week.

Both cohorts deliver

B.Tech 85% and M.Tech + MS(R) 85% placement in 2024-25.

Breadth of roles

Six role families hired — core energy, analytics, software, consulting, finance, product.

Engineering & Analytical Skillset

Design & CAD

- AutoCAD
- Fusion 360
- SolidWorks
- ANSYS SpaceClaim

Simulation & CFD

- ANSYS Fluent
- COMSOL
- OpenFOAM
- Battery Modelling
- PCM Thermal Modelling
- ICEM CFD
- ANSYS Mechanical

Experimental & Characterisation

- Material Synthesis
- Electrode Fabrication
- Spin Coating
- Thermal Evaporation
- XRD
- SEM
- EIS

Energy & Process Modelling

- PVsyst
- NREL SAM
- Homer Pro
- WAsP
- windPRO
- Wake Modelling

Electrical, Power & Embedded

- PSCAD
- SCADA
- Arduino IDE
- Simscape Battery
- BMS Design
- SOC Estimation

AI, ML & Forecasting

- Machine Learning
- XGBoost
- Random Forest
- LSTM
- Time-Series Forecasting
- Digital Twin

Programming & Data

- Python
- MATLAB
- Simulink
- C++
- Java
- SQL
- NumPy
- Pandas
- Advanced Excel
- Power BI
- Tableau

Techno-Economics

- LCOE / LCOH
- NPV / IRR
- Sensitivity Analysis
- LCA & Circularity

DIFFERENT ASPECTS OF ENERGY AT DESE

ENERGY TECHNOLOGY

- Battery Storage
- Hydrogen Energy and Fuel Cell Technology
- Electrical Energy Management
- Wind & Hydro Power system
- Energy Storage
- Carbon Capture and Utilization
- Puise wisth modulation technique
- Fuel Technology
- Distributed & De–centralised energy systems
- Solar Thermal Power generation
- Industrial Energy and Environment Analysis
- Plasma Energy and Environment

ENERGY POLICY AND PLANNING

- Economics and Financing of Renewable Energy Systems
- Quantitative methods for Energy Management and Planning
- Energy Audit
- Energy Policy and Planning
- Carbon Audit and Management
- Environmental Audit and Impact Assessment
- Hazardous Waste Management

LABS WE HAVE

- Engines and Unconventional Fuels
- Clean Fuels and Energy
- Computational Combustion
- Computational Materials Research
- Hydro and Wind Power
- ELNIBS Plasma
- Atmospheric Plasma Research
- Multi Functional Plasma
- Solar Photovoltaics
- Semiconductor Thin Film and Emerging Photovoltaic
- Organic & Hybrid Electronics Device
- Solar Concentrator
- Advanced Cookstove Testing
- Solar-Biomass Research
- Thermal Devices Testing
- Advanced Batteries Research
- Energy Simulation
- Advanced Electric Transportation & Power Generation
- Power Electronics Application Research

B.Tech - Energy Engineering

Undergraduate program focusing on energy engineering principles

PhD - Energy Science & Engineering

Doctoral program for advanced research in energy science and engineering

M.Tech - Energy & Environment Technologies and Management (ESN)

Postgraduate program combining energy and environmental management

PG Diploma - Solar Systems and Management

Postgraduate program specializing in solar energy systems, technology, and project management

M.Tech - Renewable Energy Technologies and Management (ESR)

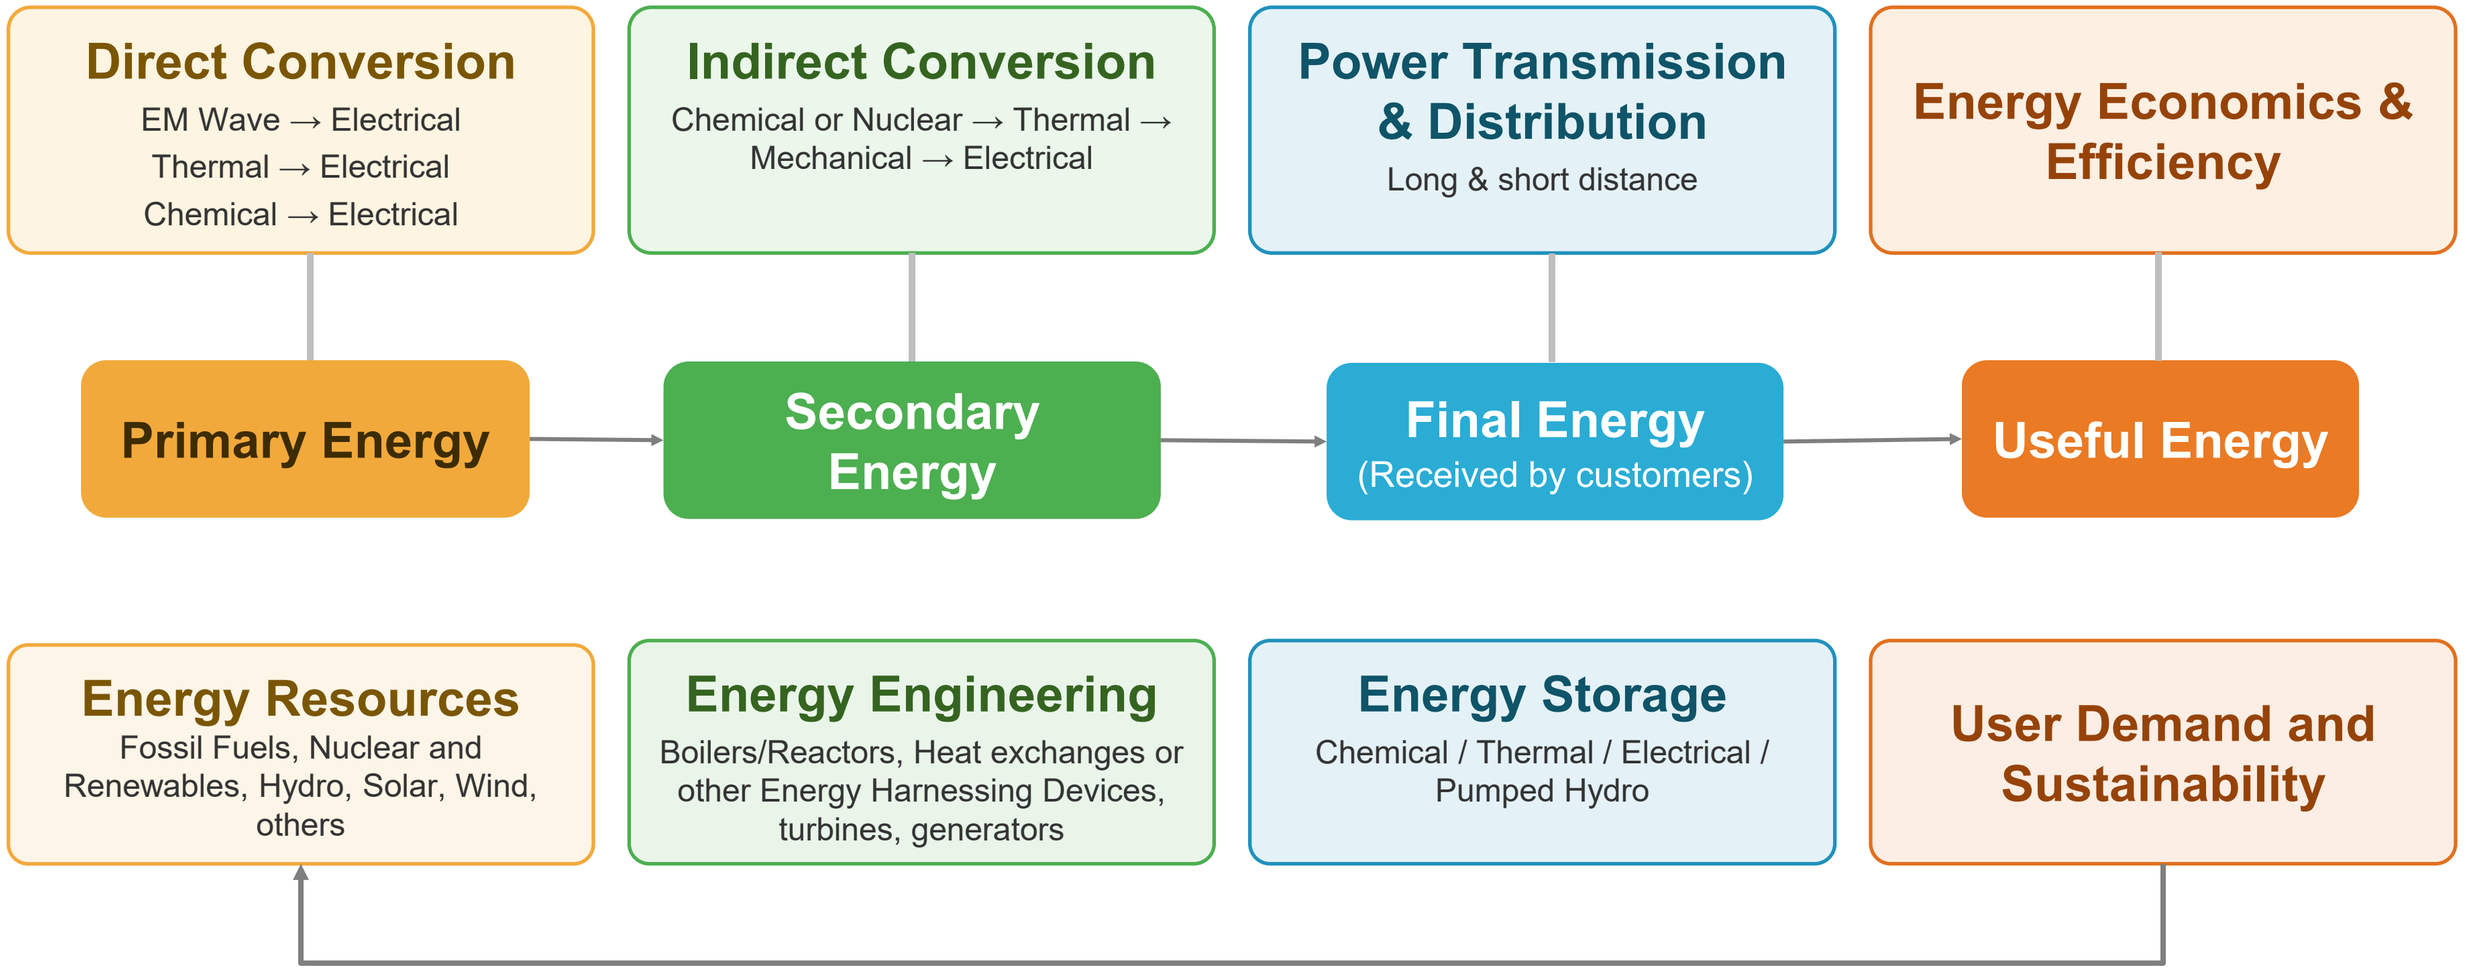

(Working Professional Only)

Postgraduate program specializing in renewable energy technologies

MS(Research) - Energy Science & Engineering

Research-oriented program in energy science and engineering

PERSPECTIVE FOR AN ENERGY SYSTEM

Why hire a B.Tech graduate?

Practical Expertise

Hands-on exposure through energy, electrical and innovation laboratories, supported by design oriented coursework and project work.

Analytical/Computational skills

Strong grounding in mathematics, programming, modelling, computational methods and AI, enabling data-driven analysis of energy systems

Energy Transition Perspective

Exposure to renewables, energy storage, hydrogen, power systems, efficiency and sustainability, with an understanding of technology, economics and environmental interactions

Engineering Breadth

A multidisciplinary foundation spanning thermal, electrical, materials, and energy engineering enabling students to work across diverse energy technologies.

What the curriculum builds?

- Academic excellence and training
- Six-month B. Tech. project
- Diverse laboratory work and experimentation
- Computing and Modelling
- Industrial visits and interactions
- Two-month full-time internship
- Seminars, Presentations and workshops by students and industry

Why hire a M.Tech graduate?

Practical Expertise

We have diverse range of laboratories with wide range of experimental cohorts that actions industrial as well as research roles.

Simulation & Validation

Along with the academic excellence, we also have simulation and programming efficiency from the MTech. students as a part of the curriculum, via projects and assignments.

Industry Ready Solutions

With rigorous project and internship exposure, as a mandate for MTech curriculum, students are well-trained and exposed to the industrial and research culture from day one.

Research Rigor

MTech at IIT Delhi is not limited to technical achievements and industry. Our students perform one year of research project, which makes them ready for research and innovative roles as well, without worry.

How the rigorous MTech curriculum makes the best candidates?

- Academic excellence and training
- Six-month Cornerstone project since 1st Semester
- Diverse laboratory work and experimentation
- One-year Thesis based Major Project work
- Industrial visits and interactions
- Two-month full-time internship
- Seminars, Presentations and workshops by students and industry

MS (RESEARCH)

Energy Science and Engineering • IIT Delhi • Recruitment 2026-27

Thesis-led, two-year research degree • Available for internships and full-time roles

WHY HIRE A M.S Graduate?

Deep Domain Expertise

Two years, one problem: end-to-end research ownership from scope to defence.

Ramps up fast on hard, ill-defined problems.

Industry-Ready Solutions

Industrial CFD, HPC, Scripting & Data Tools for Real-World Engineering Applications.

Productive on your stack from week one.

Simulation & Validation

Equally at home with solvers and test rigs: numerically validated, not assumed.

Fewer surprises between model and hardware.

Research Rigor

Peer-Reviewed Research, Uncertainty Quantification & Reproducible Workflows.

Analysis that survives review and audit.

Industrial simulation toolchain paired with hands-on laboratory work.

LABORATORIES

- Computational Combustion Laboratory (CCL)
- Clean Fuel and Energy Laboratory (CFEL)
- IC Engine & Alternate Fuels Laboratory
- Fuel Technology Laboratory
- Advanced Battery Research Laboratory (ABRL)
- Solar Photovoltaics Laboratories
- Solar Thermal & Refrigeration Laboratory
- Electrical Power & Renewable Energy Systems Lab
- Power Electronics Applications & Research Lab (PEARL)
- Plasma Science & Technology Group (PSTG)
- Hydro & Wind Power Laboratory

RESEARCH SPECIALISATIONS

Battery & Storage
- → Na-ion and Li-ion cells
- → Battery management systems
- → Pack and thermal modelling

Hydrogen & Fuel Cells
- → Electrolysers and fuel cells
- → Green hydrogen value chain
- → Storage, safety and codes

Solar PV & Semiconductors
- → Device physics, PECVD, SCAPS
- → Perovskite / Si tandem cells
- → Solar thermal and storage

Wind & Hydro
- → Wind resource assessment (WRA)
- → CFD turbine and wake design
- → Techno-economics of wind farms

Combustion & Alternate Fuels
- → Ammonia and hydrogen blending
- → LES / FGM flamelet modelling
- → Chemical kinetics, flame stability

CCUS & Net-Zero
- → Capture, utilisation and storage
- → Process integration and costing
- → Carbon accounting and LCA

Emission Control & Air Quality
- → NO_x, N_2O and unburnt NH_3
- → Fuel staging and after-treatment
- → Engine and burner emission testing

Electrical Energy & Grid
- → Power electronics and drives
- → Grid integration and stability
- → PSCAD, PLECS, SCADA studies

Thermal & Building Systems
- → Waste heat and cogeneration
- → Smart metering, green buildings
- → Thermal management of systems

Energy Systems & Policy
- → Demand forecasting, energy models
- → Carbon markets and policy
- → Project finance and feasibility

Plasma, Materials & Environment
- → Plasma technologies and diagnostics
- → Material synthesis, XRD / SEM
- → Life cycle assessment (LCA)

SKILLS IN RESEARCH AND TECHNOLOGY

Computational & CFD
- ANSYS Fluent / CFX
- CONVERGE, OpenFOAM
- COMSOL Multiphysics
- Cantera, CHEMKIN kinetics
- Aspen Plus process models
- Solver UDFs and sub-models
- Meshing and HPC (Linux clusters)

Design & Systems Tools
- SolidWorks, AutoCAD, Fusion 360
- MATLAB / Simulink
- HOMER Pro, PVsyst, SAM
- SCAPS, PC1D
- MS LATTICE
- System sizing and layout
- Control loop design

Experimental & Diagnostics
- Laser diagnostics (PIV, PLIF)
- Engine and burner test cells
- NO_x / N_2O / NH_3 analysers
- Fuel cell, electrolyser rigs
- PECVD, device fabrication
- PCB and power electronics
- Turbomachinery and flow rigs

Programming & Data
- Python, C, C++, Java, Fortran
- SQL, R, Tableau, Power BI
- Advanced Excel, shell scripting
- AI / ML and surrogate models
- Tecplot, ParaView, OriginLab
- Automated post-processing
- Version control and pipelines

Analysis & Economics
- Techno-economic analysis
- LCA, carbon accounting, net-zero
- Uncertainty quantification
- Risk and sensitivity analysis
- Optimisation, trade studies
- Project finance, feasibility
- Policy and regulation reading

Research Output & Impact
- Peer-reviewed journal papers
- International conferences
- Patents and IP disclosures
- Sponsored, consultancy work
- Industry collaboration
- Literature review at depth
- Seminar and review presenting

CAREER AVENUES

- R&D Scientist
- CFD & Simulation Engineer
- Energy Consulting
- Data Science & Modelling
- Techno-economic Analyst
- Product & Technology
- Sustainability & ESG
- Battery & EV Systems
- Grid & Power Systems
- Process & Design Engineer
- Policy & Regulatory Affairs
- PhD / Academia

Department of Energy Science and Engineering • Block V, Academic Area, IIT Delhi, Hauz Khas, New Delhi 110016

https://dese.iitd.ac.in

Why hire a PhD graduate?

Practical Expertise

Hands-on expertise across diverse energy technologies, supported by advanced laboratories and experimental facilities. DESE researchers work on real-world energy challenges spanning renewable energy, storage, fuels, power systems and energy-environment applications.

Simulation & Validation

Advanced modelling, computational tools and experimental validation are integral to DESE research. From CFD and energy-system modelling to battery, solar and plasma studies, simulations are rigorously validated against experimental results.

Industry Ready Solutions

Research at DESE bridges fundamental science and practical engineering, translating innovative ideas into scalable energy technologies and solutions. Strong engagement with industry and sponsored projects prepares researchers to address real-world energy challenges

Research Rigor

DESE fosters rigorous, interdisciplinary research focused on solving complex national and global energy challenges. Doctoral research combines strong theoretical foundations, experimentation, quantitative analysis and innovation to create new knowledge and impactful technologies

How the rigorous PHD curriculum makes the best candidates?

- INNOVATION & R&D
- INDEPENDENT PROBLEM SOLVING
- EXPERIMENTAL & ANALYTICAL SKILLS
- SCIENTIFIC WRITING & PUBLICATIONS
- RESEARCH COMMUNICATION & SEMINARS
- INTERDISCIPLINARY EXPERTISE
- LEADERSHIP & PROJECT MANAGEMENT

Department of Energy Science and Engineering • Block V, Academic Area, IIT Delhi, Hauz Khas, New Delhi 110016

RECENT RESEARCH PROJECTS AT DESE

PROJECTS

Battery

- Room-temperature **Sodium-Sulfur** Batteries for Stationary Storage Applications.
- Design and Development of **Sodium-based Dual-ion Batteries** for Stationary Storage Applications.
- Electrochemical and Thermal modeling of High energy **bipolar Na-ion battery**.
- Understanding the role of densification on **solid electrolyte** for **sodium ion solid state battery**.
- Development and Fabrication of **Anode Material** in **Sodium Dual-Ion Batteries**.
- In the quest for high-capacity **bipolar electrodes** for bipolar Na-ion batteries.

Solar Energy & Photovoltaics

- Development of large area 152.4 mm x 152.4 mm 23% efficient **silicon heterojunction solar** cells, ~25% efficient **tandem cells** of 50 mm x 50 mm area.
- Development of thin **silicon nanocrystalline** as carrier selective layers for **silicon heterojunction** solar cells fabrication.
- **Traveling Wave-Based Fault Detection** and Location for AC Side Faults in Phase Shifted Full Bridge (**PSFB**) Converter-Based Grid-Connected Solar PV Inverter Systems.
- AI/ML driven studies of **perovskite solar cells** for indoor applications.
- **Reliability** Studies and **TCAD-Aided Modeling** of Commercial **TOPCon** PV Cells.
- Reliability and **Performance Analysis** of PV modules.

Alternative fuel and combustion

- Hydrogen blending & **CFD** analysis of combustion.
- Formulating **Alcohol Gels** for efficient and Cleaner **Fuel transportation**.
- Development and Demonstration of Clean Combustion Devices using **Processed Biomass** and Assessment of Potential Health and **Environmental Benefits**.
- Enhancing Thermal transport properties of 3-D printed porous Matrix of Alternative Energy Solution.
- Waste-to-Energy Plant based on **Plasma Pyrolysis Plant**.

Hydrogen & Fuel Cell

- Sorption **Hydrogen Compressor** for Vehicular and Power Generation Applications.
- Assessment of Material Requirement, Energy Performance and Environmental Impacts of Renewable Energy Systems and **Green Hydrogen** for Energy Security.
- **PEM Fuel Cells.**
- Design and development of **PEM fuel cell** and **mass transfer modelling** of fuel cell.
- Experimental Investigation & **AI-Driven Modelling** for Performance Assessment in Hydrogen

Wind & Hydro

- Investigation of the influence of wake velocity on the performance of **wind turbine** in a wind farm.
- **Wind turbine performance**, dynamic stall and vortex breakdown.
- Wind energy forecasting using **Artificial Neural Network**.
- Wind resource assessment, **wake modelling** and wind farm optimization using SCADA, WAsP, WindPRO and CFD.
- Data-driven and **physics-informed modelling** for wind turbine/farm performance analysis, fault detection and energy-yield prediction.
- **Hybrid** wind-solar-battery systems: energy-yield assessment, techno-economic optimization and **grid-integrated** operation.

Policy & Sustainability Practices

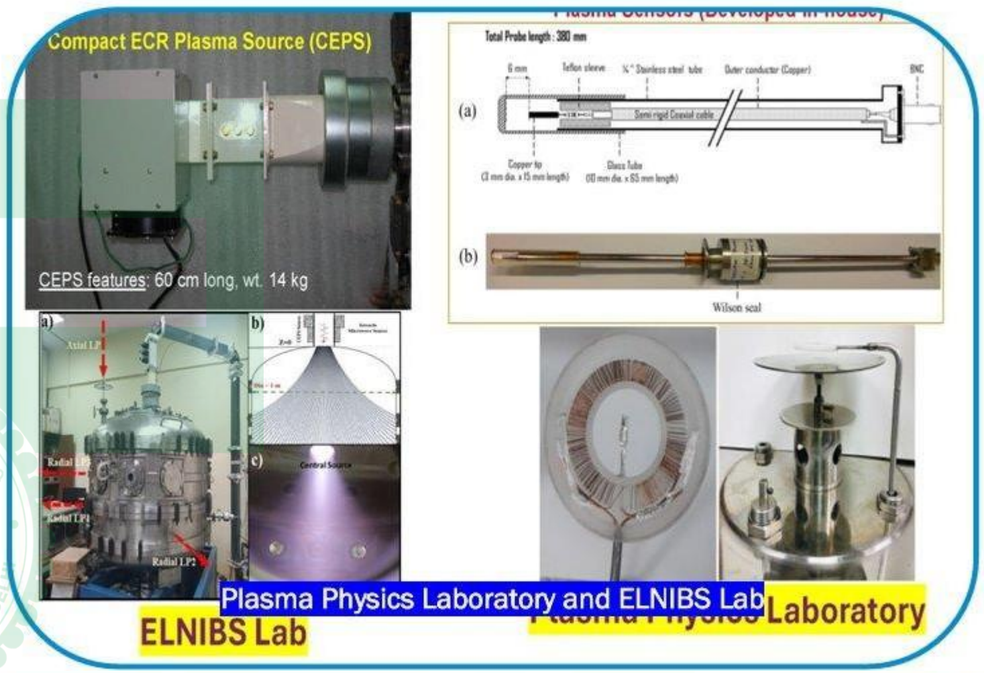

- SUSTENANCE: Sustainable Energy system for Achieving **Novel Carbon neutral Energy** communities.
- Study of the **Long-term Trends** and **Co-variability** in Wind, Solar and Precipitation Resources in different states of India and the Relationship between them.

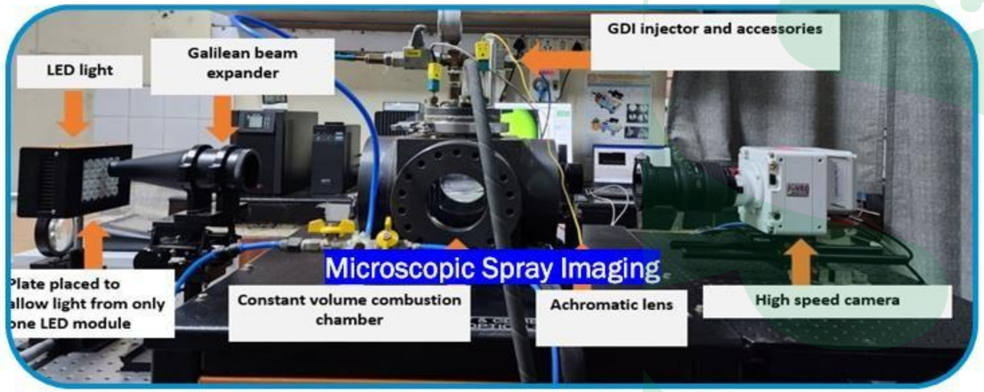

Propulsion & Advanced Application

- Design and development of **high power density motor drives** meant for high speed application.
- Design, Development, and Testing of **Medium Voltage High Power Propulsion** System.
- A Langmuir probe and a novel E probe for in situ measurements of plasma parameters in planetary ionosphere

RECRUITMENT PROCESS

1

IIT Delhi sends an invite

Once you show interest, an email is sent by the placement office along with relevant details and a registration link.

2

Companies fill the JNF/INF

JNF-Job Notification Form and INF-Internship Notification Form needs to be filled by the recruiter. Once it is frozen, the opening is listed in the IITD Recruitment Portal.

3

Shortlist, Interview & Recruit

Interested students apply through the portal. Resume(s) and Portfolios
are sent via mail. Recruiters shortlist, interview and hire the students.
